**QIn G3**

**To reproduce sound** is, of course, the most important role for a loudspeaker. At the same time they are supposed to function in a home without disturbing the interior design. The Qln G3 is a new loudspeaker; discreet but with a character and with exceptional sound quality.

The design of the Qln G3 is natural. Size, proportions, and choice of material are based on our collective knowledge in natural sound reproduction and of the acoustics in a home. The shape comes from acoustical reasons and just as with a musical instrument, there is no need to decorate or conceal.

When listening to a pair of these loudspeakers you will search for words like clean, clear, mature and distinct. The soundstage is deep and natural – also when you turn up the volume. This in spite of the diminutive units employed. We select them carefully, and we have also more than 20 years of experience of developing methods to control what goes on inside a loudspeaker.

The secret of the Qln G3 is a new method of mastering the movements of the loudspeaker cones. Without using electronics we let them work under optimised conditions. By this we can use smaller units, which in itself improves clarity and accuracy.

Take your time and listen to them carefully. You will find that they sound the way they look. Clean, uncomplicated and natural.

**2-way transmission line loudspeaker.**

**Impedance:** 4 ohms.

**Sensitivity:** 88 dB/1W, 1m.

**Low frequency response:** -3 dB 48 Hz.

**Woofers:** 2x 3-inch coated paper cones.

**Tweeter:** 1-inch neodymium with rear chamber.

**Recommended amplifier:** 20 - 150 W.

**Size:** 1234x110x160 mm (foot 230x300).

**Weight:** 11,2 kg.

**Finish:** Cherry, Lacquer on request.
