

We are pleased to introduce the Qln Prestige Five – an unprecedented 2.5-way, floor standing loudspeaker that marks the advancement and continuation of our highly successful Prestige series. Decades of design experience has proven time and time again that what separates a good loudspeaker from an exceptional one is the midrange. For the Prestige Five, we spent years developing a new, superb sounding 184mm Kevlar® mid-woofer that conveys instruments and vocals with unprecedented clarity, resolution and naturalness.

The Prestige Five

Your ears will tell you how right we are.

The Prestige Five exemplifies a timeless combination of form, function and performance. It is the fruit of Qln's four decades of speaker research, development, design and construction. A meticulous selection of matched components ensures every part of the speaker synergizes perfectly together.

Our slanted baffle provides perfect time alignment between woofer and tweeter and the truncated pyramid cabinet top with its minimized baffle area suppresses standing waves inside the cabinet as well as baffle effects which in turn improves 3D imaging.

The cabinet construction is based around Qln's unique Qboard® technology, where structural resonances are eliminated. The bass reflex port with its trumpet shape at both ends eliminates air turbulence. The Cabinet is de-coupled from the floor via solid feet with cones and pucks constructed out of hard, high damping materials.

Our 184mm Kevlar® mid-woofer was custom developed by Qln together with industry renowned Danish driver manufacturer Scan Speak and offers the latest in 21st century advanced driver technology. It features an under-hung magnet system where the voice coil is in the magnet gap all the time, resulting in a totally linear motor system.

Internal cabling is our own and specially designed and produced in Sweden. It consists of 12 solid core pure copper wires wrapped around a polypropylene core with polypropylene isolation.

Every part of the speaker has one thing in common – non-resonant behavior. This suppresses disruptive noise, vastly improving dynamics and preserving silence between tones as a result. The Prestige Five presents a more dynamic and relaxing sound with remarkable clarity.

Nothing is added – just pure music!

Impedance: 4 ohms

Tweeter: 25mm wide surround, Air-Circ magnet, soft dome

Mid-Woofer: 184mm Kevlar® cone, under-hung magnet system

Woofer: 184mm hard cone, under-hung magnet system

Sensitivity: 89dB SPL 1 Watt 1m

Low frequency performance: -3dB 26Hz

Cabinet: Qboard® Technology

Terminal: Single wire, WBT Nextgen®

*Dimensions: (HxWxD): 1000x210x600mm (cabinet),
1054x315x650mm (with feet)*

Weight: 41,0 kg each

Finish: Walnut Piano, Walnut matt, White satin
